

# Hungry Horse Core Main Menu - Autumn Winter 2024

## Nutritional Information

### Key & Interpreting the data

The figures below highlight the nutrition values for each complete dish as listed on the menu.

The RI columns indicates the % of recommended Reference Intakes (RI) for an average adult (8400 KJ/ 2000 kcal per day) for each nutrient. They are based on official recommendations for an average adult, doing an average amount of physical activity. These are intended as a guide, not a target.

Figures are typical for that dish and may vary slightly as a result of manufacturing tolerances and cooking assembly.

Where there are options available, these will appear underneath the corresponding dish, please add the nutrition for the choice to the total dish.

When referring to Children's menu nutritional information, please be aware Children between 5-10 years old need around 1,800 calories a day, but this will vary by age and level of activity and some children will need less, and some will need more.

As a result of the above, we do not provide this information as medical advice. However we provide this information to ensure our guests are able to make an informed decision when choosing to dine with us.
